

Sarix Enhanced Duo

Double down on security

Securing stairwells and hallways is difficult. You usually need multiple cameras, which can cause blindspots or added costs. The Sarix Enhanced Duo combines two sensors into one to help capture various angles without the expense and hassle of installing and managing two cameras.

One camera, twice the security

Orient the cameras to capture a 180-degree view or position them in opposite directions to keep track of activity happening in two different directions simultaneously.

Max protection, less resources

Combat high costs, reduce resource requirements and streamline deployment by consolidating multiple sensors into a single device.

Elevate your security

Use Elevate to automate camera management tasks and decrease routine checks and maintenance.

Your peace of mind, in mind

Protect your site from vulnerabilities and network attacks with FIPS-140-2 level 3 compliant onboarded TPM, Secure Boot and automatic firmware updates.

Use your eyes and ears

Use the camera's built-in microphone and audio analytics to detect loud or unusual sounds and record audio when necessary.

Work with your current systems

Eliminate the need and costs associated with a site overhaul. The Sarix Enhanced Duo fits into your existing system and can connect to any third-party VMS.
